Innovations From Your Specialty Films Partner

WINfresh®

Breathable Films for Fresh Produce

An Innovative Solution

The WINfresh® family of coextruded films offered by Winpak is engineered to provide optimal oxygen transmission rates (OTR) for products with critical breathability requirements.

With OTR's ranging from 125 to 400 cc/100 sq. in. / 24 hours, these films are ideal for packaging distinct groups of produce. A controlled atmosphere created by a sealed WINfresh® package will extend product shelf life, thereby maintaining its freshness.

Customers continue to find Winpak's packaging expertise and innovative technology to be a refreshing solution to their fresh produce packaging needs.

Product Offering

The WINfresh® product family is offered as tubing, sheeting or as pre-made bags to create a controlled atmosphere package for the food service, retail, and wholesale markets.

The Winpak Advantage

- Optimum control of OTR
- Preserve product freshness and appearance to extend shelf life
- Heat seal strength and consistency
- Good clarity and gloss
- Moisture barrier
- Good machineability and printability
- Abrasion and pinhole resistance
- Custom printing in up to 10 colors

| Film | Gauge | O.T.R. | Typical Applications |
|---------------|----------|--------|---|
