

April 2000

WINPAK EXPANDS IN WINNIPEG, CANADA

An expansion of approximately 8,500 square feet began in April 2000 at the Winnipeg plant. The building, which is now complete, is designed to house four blown coextrusion lines. A further 55,500 square foot expansion commenced in June. This expansion will provide additional space to extend the flexographic printing and lamination capacity.

The Winnipeg plant produces film for modified atmosphere and liquid packaging.
